

Remanufactured Lift Truck Parts

Remanufactured Lift Truck Parts - Forklifts are quite pricey pieces of equipment because a brand new electric lift truck model can cost starting from \$18,000 to \$25,000, for a five thousand pound equipment. Moreover, a few thousands of dollars would have to be invested in a battery charger and battery. A similar internal combustion lift truck of the same lift capacity will cost a little less and the diesel units which are capable of heavier lifting capacities could cost upwards of \$100,000. Reconditioned lift trucks are a choice to be able to save a large amount of money for the reason that they cost less than half the price of new units.

Several individuals think they will deal with more maintenance problems if they buy a reconditioned forklift and are skeptical of purchasing a second-hand lift truck at a sale price. A correctly reconditioned forklift will function just in addition to a new one and whatever worries of upkeep are unfounded. Even though your lift would get heavy use, as long as you take proper care of the equipment, it will serve your needs and potentially save you a lot of money.

It is important to establish what the seller means by a reconditioned or refurbished forklift when considering acquiring a second-hand forklift. Lots of companies do a very good job reconditioning a model before selling it. This comprises disassembling the lift truck, rebuilding the engine, sandblasting the lift and next reassembling everything and finishing with a fresh coat of paint.

To thoroughly reconstruct a forklift engine, a good company would initially absolutely disassemble it. A heat cleaning system is then utilized to clean all of the components. When this step has been done, all of the components are checked to see if they have any breakage, any extensive wear or any defects. Some parts like for instance connecting rods, cylinder heads, crankshafts and cylinder blocks are resized, reground and resurfaced if necessary. Various components like for instance bolts, gears, nuts and that are replaced or repaired as considered necessary.

When the overhaul has been completed, the engine is rebuilt by hand. After being put back together, a series of tests are applied to the running machinery so as to check all of the parts and make positive there are no leaks or problems. If any problems occur, the necessary changes are done.

There must be no reason to be apprehensive about obtaining a reconditioned or refurbished lift truck from quality sellers. The process of rebuilding the equipment ensures the utmost in reliability. Upkeep costs could truly work out to be less as you will avoid the initial phase of higher repairs projections that a brand new forklift has as it is broken in. By following routine maintenance schedules and taking care of the machinery correctly, a reconditioned lift truck would serve you well.
