

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings which are utilized on lift masts so as to help them work in challenging environmental conditions. Lift masts are often subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences like for example dust, cold, heat, moisture, contamination and aggressive ambient air. Hence, the guidance arrangements of lift masts have to be specifically robust and have a specific high load carrying capacity.

In order to help compete in lots of various environmental conditions, carriage rollers were designed for several lift masts. While having the ability to handle a particularly high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
